Delta Sound has recently taken delivery of 9 x FFA-6004 4 channel amplifiers to power its recent purchase of thirty-two EMS-122w loudspeakers from EM Acoustics for core rental stock. The FFA-6004 is a 4 channel lightweight multipurpose which is rated at 1500w per channel and is ideally suited to driving the EM Acoustic high power full range wide dispersion EMS-122W.

Delta Sound operations director, Jon Bell, explained his choice. "We needed to source thirty-two high quality 12" loudspeakers and flying frames within a very short lead time for a specific rental project. The speakers and amplifiers needed to be installed and working within a month and would remain in situ for another 9 months working six days per week for twelve hours a day during that period. Obviously the bar was set pretty high from the outset, so we needed to know that whatever we invested in would be 100% reliable, and that we could count on the manufacturer to deliver on time."

We're using Full Fat Audio FFA-6004 four-channel amplifiers to drive the EMS-122w's which we purchased off the shelf and work faultlessly with the EM enclosures. It's an excellent combination. Once the boxes have come off the current hire, they'll make an excellent addition to our day-to-day inventory."

Delta Sound have historically specified FFA amplifiers and in particular 4 channel models for permanent sound installations such as The Westfield shopping centre in Shepherds Bush and Ealing Town Hall. These installations also using loudspeakers from EM Acoustics.
